Techceram expand their range of All-Ceramic Restoration options

At the DTS Show, Techceram announced that they have expanded their range of All-Ceramic Restoration options with the addition of IPS e.max pressable ceramic and IPS ZirCAD zirconium based substructures. This means that, via the 37 members of their All-Ceramic Excellence (ACE) Group of Laboratories, Techceram now offer an even wider range of All-Ceramic Restoration options, including Techceram Alumina base layers for single anterior restorations and Lava Zirconia single and multiple unit substructures.

Techceram also highlighted their flex-al porcelain range which is the extremely economical, user friendly and flexible replacement for the discontinued Alpha Classic Shade Porcelain.

flex-al is the perfect porcelain for use on Techceram flame sprayed alumina single unit and other alumina based copings. It can also be used for PJC's and Veneers. The highest Flexural Strength porcelain available, it offers superb aesthetics - enhanced by Incisal and Effect Opalescent porcelains, which are stable even after repeated firings - and four Opaque Liners which can be used to block out underlying discolouration.

Techceram currently have Special Offers on their complete flex-al range. The flex-Al Trial Packs (shades A2 & A3) are on offer for just £ 39.00 including a voucher for a Free Techceram substructure worth £ 40.00. Alternatively the Foundation Set is available with 3 free Techceram Base Layers (worth £ 120.00) and the Complete Set is available with 5 free Techceram Base Layers (worth £ 200.00).
